

ABGRESS-ITTM

**Esomeprazole Magnesium Trihydrate
(EC) & Itopride HCL(SR) Capsules**

Description

ABGRESS IT is a clinically effective combination of Esomeprazole 40 mg and Itopride 150 mg, formulated to provide comprehensive relief from acid-related gastrointestinal disorders and motility issues. This dual-action medicine works by reducing excess stomach acid while also improving gastric movement, making it an ideal choice for patients suffering from conditions such as gastroesophageal reflux disease, functional dyspepsia, acidity, and indigestion.

Manufactured with high-quality standards, ABGRESS IT helps restore digestive comfort and improves overall gut function. It is commonly prescribed by healthcare professionals in India for patients who experience persistent acidity along with symptoms like bloating, nausea, early satiety, and abdominal discomfort.

Uses

ABGRESS IT is widely used for the management of various gastrointestinal conditions, including:

Gastroesophageal reflux disease

Acid reflux and heartburn

Functional dyspepsia

Chronic gastritis

Indigestion and bloating

Delayed gastric emptying

Nausea and vomiting associated with gastric disorders

By addressing both acid secretion and impaired gut motility, ABGRESS IT offers complete symptom control and long-lasting relief.

Benefits

The combination of Esomeprazole and Itopride provides multiple therapeutic benefits:

Effectively reduces excess stomach acid

Improves gastric motility and digestion

Relieves heartburn, acidity, and acid regurgitation

Reduces bloating, nausea, and fullness after meals

Helps heal acid-related damage to the stomach and food pipe

Enhances patient comfort and quality of life

ABGRESS IT is especially beneficial for patients who do not get adequate relief from acid-suppressing medicines alone.

Dosage

The dosage of ABGRESS IT should always be taken as advised by a healthcare professional. Typically, it is recommended to take the tablet before meals, preferably in the morning. The tablet should be swallowed whole with water and should not be crushed or chewed.

Dosage may vary depending on the severity of the condition, patient response, and medical history. Do not exceed the prescribed dose without consulting your doctor.

Side Effects

ABGRESS IT is generally well tolerated when taken as prescribed. However, some individuals may experience mild side effects such as:

Headache

Diarrhea or constipation

Abdominal pain

Nausea

Dizziness

Flatulence

These side effects are usually temporary and resolve on their own. If any symptom persists or worsens, medical advice should be sought promptly.

Precautions and Warning

Use with caution in patients with liver impairment

Inform your doctor if you are pregnant or breastfeeding

Not recommended for long-term use without medical supervision

Avoid alcohol consumption during treatment as it may worsen acidity

Inform your doctor about any other medicines you are taking to avoid interactions

Seek immediate medical attention if severe allergic reactions occur

Patients should follow dietary and lifestyle modifications along with medication for better outcomes.

Conclusion

ABGRESS IT is a trusted and effective solution for managing acid reflux and digestive motility disorders. With the combined action of Esomeprazole 40 mg and Itopride 150 mg, it not only controls acid production but also enhances stomach movement, providing complete and sustained relief from gastrointestinal discomfort.

When used under medical supervision, ABGRESS IT helps improve digestion, reduces symptoms, and supports better digestive health, making it a valuable choice for patients suffering from chronic acidity and related conditions.
